Customer Reviews

This is the best early intro to engineering I've ever seen. I used it with my son who has ended up as a physics major. The projects are both beautifully simple to construct and to analyze construction itself. Appropriate for mature 5 yr olds up to middle school.

Bought this to play with my grandson along with a case of straws :-). He didn't look at the book too much, I enjoyed it. But the point was the kickstarting of the building of our own house, using some of their techniques, and some of our own. A great time was had by all!

It was a bit more "used" than I thought it would be but overall it was a great book for the boys.

Good ideas!!
